

Aaron Beyene

EDUCATION

Georgia Institute of Technology

Atlanta, GA

B.S. in Computer Science — GPA: 3.66

Aug 2022 – May 2026

- **Concentrations:** People & Media
- **Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Objects & Software Design, Computer Organization, Discrete Mathematics, Computer Graphics, Computer Audio, Applied Combinatorics

SKILLS

Languages: Java, Python, JavaScript, HTML, C#, C++, C, SQL

Frameworks & Tools: Spring Boot, React, JPA/Hibernate, PostgreSQL, MySQL, MongoDB, Docker, Git, GitHub Actions, Linux, REST APIs, OpenAI API, Selenium, JUnit, PyTest, CI/CD, Agile, Jira

WORK EXPERIENCE

ServiceNow

San Diego, CA

Software Quality Engineer Intern

May 2025 – Aug 2025

- Developed and executed automated test cases using **Java** and **Selenium**, improving regression coverage across enterprise workflows.
- Identified and documented critical defects through end-to-end testing, accelerating issue resolution across cross-functional teams.
- Collaborated with developers and QA engineers in an **Agile** environment to improve product reliability and release quality.

Outlier

Atlanta, GA

AI Training Intern

May 2024 – Aug 2024

- Evaluated AI-generated code across **Python**, **Java**, and **C++**, improving model response quality and accuracy.
- Created and reviewed technical datasets used to train large language models on software engineering tasks.
- Performed large-scale quality assurance on model outputs, ensuring consistency across coding and reasoning benchmarks.

Georgia Tech VIP

Atlanta, GA

Undergraduate Research Developer

Jan 2024 – May 2025

- Developed a machine learning classification tool in **Python** for academic research data, achieving an **83% classification accuracy**.
- Integrated **OpenAlex** research data and applied NLP techniques including tokenization and text processing to build model-ready datasets.
- Collaborated with a research team to evaluate classification approaches, iterate on model performance, and translate research requirements into a working software prototype.

PROJECTS

• AI Portfolio

- Built a full-stack AI portfolio using **React**, **Spring Boot**, and **PostgreSQL**, integrating the **OpenAI API** for conversational access to projects and experience.
- Designed **RESTful APIs** and production workflows with **Docker**, **automated testing**, **security controls**, and **GitHub Actions CI/CD**.

• Dungeon Crawler

- Developed a multi-level Android dungeon crawler in **Java** with movement, collision detection, inventory, combat, and interactive game states.
- Applied **object-oriented design patterns** and developed **JUnit tests** to improve modularity, reliability, and edge-case coverage.

• Farm Frenzy

- Developed a 3D game in **Unity** and **C#**, integrating interactive entities, animations, scene transitions, audio, and user input.
- Built reusable gameplay components with **prefabs**, **scripts**, and **Unity's Input System**, supporting modular behavior and asset integration.
