

# Aaron Beyene

## EDUCATION

---

### Georgia Institute of Technology

Atlanta, GA

*B.S. in Computer Science — GPA: 3.66*

*Aug 2022 – May 2026*

- **Concentrations:** People & Media
- **Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Objects & Software Design, Computer Organization, Discrete Mathematics, Computer Graphics, Computer Audio, Applied Combinatorics

## SKILLS

---

**Languages:** Python, Java, JavaScript, C++, C, SQL, MATLAB, Assembly

**Technologies:** AWS, Docker, Git, GitHub Actions, CI/CD, Linux, React, Node.js, REST APIs, Selenium, PyTest, JUnit, MySQL, MongoDB, Agile, Jira

## WORK EXPERIENCE

---

### ServiceNow

San Diego, CA

*Software Quality Engineer Intern*

*May 2025 – Aug 2025*

- Developed and executed automated test cases using **Java** and **Selenium**, improving regression coverage across enterprise workflows.
- Identified and documented critical defects through end-to-end testing, accelerating issue resolution across cross-functional teams.
- Collaborated with developers and QA engineers in an **Agile** environment to improve product reliability and release quality.

### Outlier

Atlanta, GA

*AI Development Intern*

*May 2024 – Aug 2024*

- Evaluated AI-generated code across **Python**, **Java**, and **C++**, improving model response quality and accuracy.
- Created and reviewed technical datasets used to train large language models on software engineering tasks.
- Performed large-scale quality assurance on model outputs, ensuring consistency across coding and reasoning benchmarks.

### Georgia Tech Research Institute

Atlanta, GA

*Software Engineer*

*Jan 2024 – May 2026*

- Developed machine learning models in **Python** achieving **83% classification accuracy** on academic research datasets.
- Led software development efforts across research teams using **Git** and modern collaborative workflows.
- Presented technical findings and product recommendations to stakeholders, improving project alignment and execution.

## PROJECTS

---

### • AI Career Copilot

- Built an AI-powered platform that generated personalized career roadmaps, resume feedback, and interview preparation using LLMs.
- Designed user-focused features through rapid iteration and feedback, improving accessibility of career planning resources.

### • Personal Analytics Dashboard

- Developed a centralized dashboard to track fitness, productivity, and financial metrics through automated data pipelines.
- Created interactive visualizations that transformed personal data into actionable insights for long-term decision making.

### • Research Intelligence Platform

- Engineered a machine learning tool that classified and summarized academic research papers across large datasets.
- Implemented intelligent search and recommendation features to accelerate discovery of relevant research topics.
